Visualize the EEG output from the PREP processing pipeline.

Table of Contents

Calling directly: prepPipelineReport

This helper reporting script expects that EEG will be in the base workspace with an EEG.etc.noiseDetection structure containing the report. It also expects the following variables in the base workspace:

- summaryFile - variable containing the open file descriptor for summary
- consoleID - variable with open file descriptor for console (usually 1 unless the output is redirected).
- relativeReportLocation report location relative to summary

The reporting function appends a summary to the summary report.

Usually the prepPipelineReport script is called through the function:

```
publishPrepPipelineReport
```

It is not a function itself, to allow the MATLAB publish to dump a nice output.

Write data status and report header

```
EEGsamplePrep.set[32 channels, 30504 frames]
Error status: unprocessed
Versions:
 Detrend:v0.50 GlobalTrend:v0.50 LineNoise:v0.50 Resampling:v0.50 Referenc
